

The everlasting, no maintenance renovation!

ASB

The ASB PermanentGlassWall system will be a major game changer for the squash market. The decay of squash walls from the impact of the ball over time is a major issue for every center owner or manager. With this new system this has an end. Once installed the walls will be maintenance free and easy to clean. The newly developed fitting system allows very fast installation and installing is a clean job without dust or dirt in the center. ASB has cutting edge technology for the coating of the high end matt glass panels, the largest coating machine in Europe. The new advertising and branding opportunities make the decision to change to the PermanentGlassWall system even more appealing.

ADVANTAGES

ALL GLASS SURFACE

A squash court is subject to the continuous hard impact of the squash ball. All squash courts suffer from constant stress over time. The PermanentGlassWall can withstand this impact forever without damage or signs of usage.

NON-REFLECTIVE MATT FINISH

The finish of the ASB Permanent glass wall diffuses the light and does not allow direct light reflections. The finish also shows no reflection of the players or any other objects behind the court.

NO MAINTENANCE

The ASB PermanentGlassWall is very easy to clean. The marks of squash balls are in general less than on plaster or system walls. If required, ball marks can be removed very easily with a sponge and just a bit of water. The smooth surface of the glass wall does not allow the rubber to bond with the material and allows for this easy cleaning process.

ANY ENVIRONMENT

As glass is not subject to damage through humidity or any other external factors it can be installed and will perform ideally in any environment. ASB PermanentGlassCourts can be installed OUTDOORS.

FAST AND CLEAN INSTALLATION

With our specially designed, new fitting system the ASB PermanentGlassWall can be fitted extremely fast, even on non-level walls. During installation there is no dust, dirt or immense noise so that all activity can continue as regular in the rest of the center.

FULL DESIGN FLEXIBILITY

The colour of the court is determined by a specially developed filmcoating. We can produce this coating in any required RAL colour. In addition we can include logos, graphics or images on the PermanentGlassWall.

DOOR LATCH AND HINGES

The door latch and hinges have been continuously improved. A door with ASB aluminium fittings will not have to be re-adjusted. We use the same fittings that are used in our conventional courts, these are designed to last.

CONSISTENCY IN REFLECTION AND COLOUR

The main problem with matt glass is its appearance compared to other glass panels. It is challenging to get the matt stain right in a way that all panels have exactly the same quality finish. ASB PermanentWalls are built from special glass that gets the matt surface in an optimised and automatised process ensuring each panel is equal.

CONFIGURATIONS

WALL COLOURS

Standard wall colours in white and matt black are available. Additionally we can provide the PermanentGlassWall in every non metallic RAL colour and with patterns or graphics. The PermanentGlassWall can be custom-designed and large graphics or motives for special training routines can be included.

The option to have custom-designed front walls are a great way to refinance the investment. In this way exclusive naming rights of a court can be sold or high priority advertising space can be created.

MARKING LINES

Standard marking lines are: red, blue, green and yellow. We also offer customised marking lines.

FLOORING

Depending on the colour of the walls a standard wooden floor or a dark wooden floor is recommended. On a court with dark wall colours a white ball is used for play. Due to the contrast to the white ball ASB offers its standard SportsFloor 65 with the same finish we use on ASB ShowGlassCourt, used for the highest ranked tournaments. The dark finish is in black but still shows the natural grain of the wood and does not stain the ball or shoes.

RENOVATION ON SYSTEM, PANEL OR PLASTER COURTS

We developed a new fitting system for the ASB PermanentGlassWalls that allows the wall to be fitted to all existing squash courts, most existing walls and as a free standing wall. The new fitting system allows very fast installation that automatically will be 100% straight and level. In installation terms this is the fastest System ASB has available. A front wall installation is done easily in one day. Even existing courts with non level frontwalls will have a perfect surface after only a few hours.

In addition, the PermanentGlassWall is fitted with sound reducing insulation when fitted directly to an existing wall preventing the gap between the glass and the wall to act as a resonating box. Therefore the noise of the ball impact is reduced and not transferred directly onto the building's wall.
